

Please take a moment to look at the following pictures. As you know, orthodontists assess the dental situation in three planes of space, as well as performing a tooth by tooth exam. This is to help determine what, if anything, has gotten off track during the eruption process. Some problems are obvious, others are less conspicuous.

Transverse Dimension	Facial Asymmetry, CR/MIP Shifts, Dental/Facial Midline Shifts, Anterior Diastema, Posterior Cross Bites, Habits
A/P Dimension	Abnormal Profile, A/P Functional Shift, Class 2/3 Molar and Canine, Overjet, Anterior Cross Bite
Vertical Dimension	Disproportions of the Face Height, Flat or High Mandibular Plane Angle, Open Bite, Deep Bite, Infra/Supra Erupted Teeth, Deep Curve of Spee, Habits
Alignment/Symmetry	Arch Coordination Misfit, Symmetry, Spacing/Crowding, Missing Teeth, Rotations

True Unilateral Cross Bite: Transverse Problems

Habit-Related Maxillary Vertical and Transverse Problems

Max/Mand Transverse, Cross Bite, Crowding

Class 3 A/P, Vertical, Max/Mand Transverse Problem—Preop

Post-Phase I Treatment

Ectopic Eruption, Vertical Deep Bite Problems Due to the Lack of Management of the Eruption Process (MEP)

Mandible was very difficult to treat without phase I treatment and MEP

Early Loss of Primary Canine—Subsequent Midline, Symmetry and Spacing Problems

Appliances

Haas-Style RPE

Fan RPE

Banded Mandibular Expander

Removable Schwartz
